

# Cell & Tissue Research

Volume 270 1992

## Editors

A. Oksche, Giessen (Coordinating Editor)	J.F. Morris, Oxford
H. Altner, Regensburg	B. Scharrer, New York
M.J. Cavey, Calgary	J.R. Sladek, North Chicago
D.E. Kelly, Washington, D.C.	N.J. Strausfeld, Tucson
B. Lofts, Norwich	L. Vollrath, Mainz

## Cooperating Editors

A. Björklund, Lund	R.R. Markwald, Milwaukee
A.D. Blest, Canberra	D.R. Nässel, Stockholm
R.A. Cloney, Seattle	R. Pabst, Hannover
K. Dorshkind, Riverside	J.M. Polak, London
A.C. Enders, Davis	E. Reale, Hannover
J.B. Furness, Melbourne	J.-P. Revel, Pasadena
H.G. Hartwig, Düsseldorf	E.M. Rodríguez, Valdivia
N. Hirokawa, Tokyo	B. Russel, Chicago
T. Hökfelt, Stockholm	D.W. Scheuermann, Antwerp
A.F. Holstein, Hamburg	H. Schmalbruch, Copenhagen
R.O. Kelley, Albuquerque	A. Tixier-Vidal, Paris
H.-W. Korf, Frankfurt/M.	E.D. Wachsmuth, Basel
B. Krisch, Kiel	R.L. Wood, Los Angeles
N.J. Lane, Cambridge	

**Springer International**

# Cell and Tissue Research

This journal was founded in 1924 as the *Zeitschrift für Zellen- und Gewebelehre*, from Vol. 2 (1925) it was published with the subtitle: Continuation of the Schultze-Waldayer-Hertwig Archiv für mikroskopische Anatomie. *Zeitschrift für Zellforschung und mikroskopische Anatomie* (Vols. 1–20) (1934) as: *Zeitschrift für wissenschaftliche Biologie* (Abteilung B) edited by R. Goldschmidt, W. von Möllendorff, H. Bauer, J. Seiler. Vols. 2–28 (1938) edited by R. Goldschmidt and W. von Möllendorff. Vols. 29–33 (1944) as: *Zeitschrift für Zellforschung und mikroskopische Anatomie*, Abteilung A, Allgemeine Zellforschung und mikroskopische Anatomie, edited by W. von Möllendorff and J. Seiler; from Vol. 34 without the subtitle, Abteilung A, Allgemeine Zellforschung und mikroskopische Anatomie. From Vol. 34 (1949) edited by W. Bargmann, J. Seiler; from Vol. 53 (1960) edited by W. Bargmann, B. Scharrer, J. Seiler; from Vol. 83 (1967) edited by W. Bargmann, D.S. Farner, A. Oksche, B. Scharrer, J. Seiler; from Vol. 125 (1972) edited by W. Bargmann, D.S. Farner, F. Knowles, A. Oksche, B. Scharrer. Beginning with Vol. 125 (1972) with the subtitle Cell and Tissue Research, beginning with Vol. 148 (1974) under the title Cell and Tissue Research and the subtitle Continuation of *Zeitschrift für Zellforschung und mikroskopische Anatomie* and beginning with Vol. 235 (1984) under the title Cell and Tissue Research. Beginning with Vol. 164 (1975), edited by W. Bargmann, D.S. Farner, B. Lofts, A. Oksche, B. Scharrer and L. Vollrath; As of Vol. 193 (1978), edited by D.S. Farner, B. Lofts, A. Oksche (Coordinating Editor), B. Scharrer and L. Vollrath; from Vol. 227 (1981), edited by D.S. Farner, B. Lofts, J.F. Morris, A. Oksche (Coordinating Editor), B. Scharrer and L. Vollrath; from Vol. 228 (1983), edited by D.S. Farner, D.E. Kelly, B. Lofts, J.F. Morris, A. Oksche (Coordinating Editor), B. Scharrer and L. Vollrath. Beginning with Vol. 235 (1984), title changed to Cell and Tissue Research (no subtitle). As of Vol. 251 (1988), edited by H. Altnier, D.S. Farner, B. Lofts, J.F. Morris, A. Oksche (Coordinating Editor), B. Scharrer, N.J. Strausfeld and L. Vollrath. Beginning with Vol. 252/3 (1988), M.J. Cavey became one of the editors. From Vol. 254/1 (1988), edited by H. Altnier, M.J. Cavey, B. Lofts, J.F. Morris, A. Oksche (Coordinating Editor), B. Scharrer, N.J. Strausfeld and L. Vollrath. Starting with Vol. 268/1 (1992), J.R. Sladek became one of the editors.

Published: Vols. 1–33 (1924–1947) Julius Springer, Berlin, Vols. 34–35 (1948–1950) Springer, Wien, from Vol. 36 (1951) Springer, Berlin, Heidelberg.

## Copyright

Submission of a manuscript implies: that the work described has not been published before (except in the form of an abstract or as part of a published lecture, review, or thesis); that it is not under consideration for publication elsewhere; that its publication has been approved by all coauthors, if any, as well as by the responsible authorities at the institute where the work has been carried out; that, if and when the manuscript is accepted for publication, the coauthors agree to automatic transfer of the copyright to the publisher; and that the manuscript will not be published elsewhere in any language without the consent of the copyright holders.

All articles published in this journal are protected by copyright, which covers the exclusive rights to reproduce and distribute the article (e.g., as offprints), as well as all translation rights. No material published in this journal may be reproduced photographically or stored on microfilm, in electronic data bases, video disks, etc., without first obtaining written permission from the publisher.

The use of general descriptive names, trade names, trademarks, etc., in this publication, even if not specifically identified, does not imply that these names are not protected by the relevant laws and regulations.

*While the advice and information in this journal is believed to be true and accurate at the date of its going to press, neither the authors, the editors, nor the publisher can accept any legal responsibility for any errors or omissions that may be made. The publisher makes no warranty, express or implied, with respect to the material contained herein.*

**Special regulations for photocopies in the USA:** Photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee is paid. All fees should be paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA, stating the ISSN 0302-766X, the volume, and the first and last page numbers of each article copied. The copyright owner's consent does not include copying for general distribution, promotion, new works, or resale. In these cases, specific written permission must first be obtained from the publisher.

# Contents of Volume 270

Agulleiro B → García-Hernández MP  
Akisaka T → Kogaya Y  
Anadón R → Molist P  
Andersson K, Chen D, Håkanson R, Mattsson H, Sundler F: Enterochromaffin-like cells in the rat stomach: effect of  $\alpha$ -fluoromethylhistidine-evoked histamine depletion. A chemical, histochemical and electron-microscopic study 7-13  
Andolina KL → Tidball JG  
Andreis PG → Rebuffat P  
Araki S → Tanii I  
Araki S → Toshimori K  
Baccari GC, Vallarino M, Minucci S, Pestarino M, Di Matteo L: Immunocytochemical identification of some regulatory peptides (gastrin, gastrin-releasing peptide, neurotensin and vasoactive intestinal polypeptide) in the Harderian gland of the green frog, *Rana esculenta* 609-611  
Badia E → Duchesne M-J  
Baumann O: Submembrane cytoskeleton of pigmented glial cells, primary pigment cells and crystalline cone cells in the honeybee compound eye 353-363  
Bausenwein B, Fischbach K-F: Activity labeling patterns in the medulla of *Drosophila melanogaster* caused by motion stimuli 25-35  
Belloni AS → Rebuffat P  
Bennett RR → White RH  
Bergmann P → Karmali R  
Bertram JF, Soosaipillai MC, Ricardo SD, Ryan GB: Total numbers of glomeruli and individual glomerular cell types in the normal rat kidney 37-45  
Bevins CL → Sadler KC  
Beyer C, Eusterschulte B, Pilgrim C, Reisert I: Sex steroids do not alter sex differences in tyrosine hydroxylase activity of dopaminergic neurons in vitro 547-552  
Blackburn MB → Kingan TG  
Blankenship TN, Enders AC, King BF: Distribution of laminin, type IV collagen, and fibronectin in the cell columns and trophoblastic shell of early macaque placentas 241-248  
Burleigh DE → Furness JB  
Callaini G, Riparbelli MG: Surface cap modifications in cold-treated *Drosophila melanogaster* embryos 553-558  
Calligaro A → Casasco A  
Carlberg M: Localization of dopamine in the freshwater hydrozoan *Hydra attenuata* 601-607  
Carlson SD → Juang J-L  
Casasco A, Calligaro A, Casasco M: Proliferative and functional stages of rat ameloblast differentiation as revealed by combined immunocytochemistry against enamel matrix proteins and bromodeoxyuridine 415-423  
Casasco M → Casasco A  
Chan KK → Stay B  
Chen D → Andersson K  
Cifuentes M, Fernández-Llebrez P, Pérez J, Pérez-Figares JM, Rodríguez EM: Distribution of intraventricularly injected horseradish peroxidase in cerebrospinal fluid compartments of the rat spinal cord 485-494  
Conde E → Martín-Lacave I  
Cooke IM → Grau SM  
Cooper TG → Raczek S  
Corvilain J → Karmali R  
Dabelsteen E → Ravn V  
Dantzer V → Mayhew TM  
Denzer K → Nehls V  
Desaki J → Matsuda S  
Di Matteo L → Baccari GC  
Donald JA, Vomachka AJ, Evans DH: Immunohistochemical localisation of natriuretic peptides in the brains and hearts of the spiny dogfish *Squalus acanthias* and the Atlantic hagfish *Myxine glutinosa* 535-545  
Dores RM → Lopez KH  
Drenkhahn D → Nehls V  
Duchesne M-J, Badia E: Immunohistochemical localization of the eosinophil major basic protein in the uterus horn and cervix of the rat at term and after parturition 79-86  
Dwivedi S, Rao PDP: Cytoarchitectonic pattern of the hypothalamus in the turtle, *Lissemys punctata granosa* 173-188  
Ebbesson SOE → Östholm T  
Edwall L → Fried K  
Ekström P → Östholm T  
Ekström P → Vecino E  
Elbrønd VS → Mayhew TM  
Elias PM → Menon GK  
Enders AC → Blankenship TN  
Eusterschulte B → Beyer C  
Evans DH → Donald JA  
Farbman AI → Menco BPM  
Feingold KR → Menon GK  
Fernández-Llebrez P → Cifuentes M  
Fischbach K-F → Bausenwein B  
Fried K, Risling M, Edwall L, Olgart L: Immuno-electron-microscopic localization of laminin and collagen type IV in normal and denervated tooth pulp of the cat 157-164  
Fujita H → Matsuda S  
Fujiwara T, Uehara Y: The cytoarchitecture of the medial layer in rat thoracic aorta: a scanning electron-microscopic study 165-172  
Furness JB, Pompolo S, Shuttleworth CWR, Burleigh DE: Light- and electron-microscopic immunochemical analysis of nerve fibre types innervating the taenia of the guinea-pig caecum 125-137  
Galera-Davidson H → Martín-Lacave I  
García-Hernández MP, Agulleiro B: Ontogeny of the endocrine pancreas in sea bass (*Dicentrarchus labrax*). An immunocytochemical study 339-352  
Getchell ML → Krishna NSR  
Getchell TV → Krishna NSR  
Gibney JA → Malamed S  
Girardie J → Richard O  
Gottardo G → Rebuffat P  
Grau SM, Cooke IM: Peptidergic neurons of the crab, *Cardisoma carnifex*, in defined culture maintain characteristic morphologies under a variety of conditions 303-317  
Gröschel-Stewart U → Paul ER  
Haeflén T van, Schooneveld H: Serotonin-like immunoreactivity in the ventral nerve cord of the Colorado potato beetle, *Leptinotarsa decemlineata*: Identification of five different neuron classes 405-413  
Håkanson R → Andersson K  
Haller CJ: Evidence for the coexistence of serotonin and calcitonin gene-related peptide at the subcellular level in neuroepithelial bodies in the lung of a marsupial, *Isodon macrourus* 199-203  
Hanke J, Willig A, Jaros PP: Differential localization of leu-enkephalin and hyperglycemic hormone in axon terminals of the sinus gland of the crabs *Carcinus maenas*, *Eriocheir sinensis*, and *Uca pugnator* 521-526  
Hendy GN → Karmali R  
Herbert H: Evidence for projections from medullary nuclei onto serotonergic and dopaminergic neurons in the midbrain dorsal raphe nucleus of the rat 149-156  
Hertle L → Raczek S  
Hildebrand JG → Rospars JP  
Jap PHK → Ven PFM van der  
Jaros PP → Hanke J  
Jones RE → Lopez KH  
Juang J-L, Carlson SD: A blood-brain barrier without tight junctions in the fly central nervous system in the early post-embryonic stage 95-103  
Kaltenbach JC → Sadler KC  
Karmali R, Schiffmann SN, Vanderwinden J-M, Hendy GN, Nys-DeWolf N, Corvilain J, Bergmann P, Vanderhaeghen J-J: Expression of mRNA of parathyroid hormone-related peptide in fetal bones of the rat 597-600  
Kelly DE → Wood RL  
Kim S → Kogaya Y  
King BF → Blankenship TN  
Kingan TG, Blackburn MB, Raina AK: The distribution of pheromone-biosynthesis-activating neuropeptide (PBAN) immunoreactivity in the central nervous

- system of the corn earworm moth, *Helioverpa zea* 229–240
- Kogaya Y, Kim S, Yoshida H, Shiga H, Akisaka T: True enamel matrix of the newt, *Triturus pyrrhogaster*, contains no sulfated glycoconjugates 249–256
- Koseki T → Wood RL
- Kressin M → Salem AO
- Krishna NSR, Getchell ML, Tate SS, Margolis FL, Getchell TV: Glutathione and  $\gamma$ -glutamyl transpeptidase are differentially distributed in the olfactory mucosa of rats 475–484
- Lee SH → Menon GK
- Lopez KH, Jones RE, Seufert DW, Rand MS, Doros RM: Catecholaminergic cells and fibers in the brain of the lizard *Anolis carolinensis* identified by traditional as well as whole-mount immunohistochemistry 319–337
- Malamed S, Gibney JA, Ojeda SR: Ovarian innervation develops before initiation of folliculogenesis in the rat 87–93
- Malendowicz LK → Rebuffat P
- Mandel U → Ravn V
- Margolis FL → Krishna NSR
- Martinet L → Toumi FN
- Martín-Lacave I, Conde E, Montero C, Galera-Davidson H: Quantitative changes in the frequency and distribution of the C-cell population in the rat thyroid gland with age 73–77
- Matsuda S, Desaki J, Fujita H, Okumura N, Sakanaka M: Immuno-electron-microscopic localization of basic fibroblast growth factor in the dystrophic mdx mouse masseter muscle 569–576
- Mattsson H → Andersson K
- Mayhew TM, Elbrønd VS, Dantzer V, Skadhauge E, Møller O: Structural and enzymatic studies on the plasma membrane domains and sodium pump enzymes of absorptive epithelial cells in the avian lower intestine 577–585
- Mazzocchi G → Rebuffat P
- Meller K: Axoplasmic transport of horseradish peroxidase in single neurons of the dorsal root ganglion studied in vitro by microinjection 139–148
- Menco BPM, Farbman AI: Ultrastructural evidence for multiple mucous domains in frog olfactory epithelium 47–56
- Menon GK, Elias PM, Lee SH, Feingold KR: Localization of calcium in murine epidermis following disruption and repair of the permeability barrier 503–512
- Meyer A → Paul ER
- Mikkelsen HB, Rumessen JJ: Characterization of macrophage-like cells in the external layers of human small and large intestine 273–279
- Minucci S → Baccari GC
- Molist P, Rodríguez-Moldes I, Anadón R: Immunocytochemical and electron-microscopic study of the elasmobranch nucleus sacri vasculosi 395–404
- Møller O → Mayhew TM
- Montero C → Martín-Lacave I
- Nehls V, Denzer K, Drenckhahn D: Pericyte involvement in capillary sprouting during angiogenesis in situ 469–474
- Neri G → Rebuffat P
- Northcutt RG → Wicht H
- Nussdorfer GG → Rebuffat P
- Nys-DeWolf N → Karmali R
- Östholm T, Ekström P, Ebbesson SOE: Postsmolt change in numbers of acetylcholinesterase-positive cells in the pineal organ of the Pacific coho salmon 281–286
- Ojeda SR → Malamed S
- Okumura N → Matsuda S
- Olgart L → Fried K
- Oura C → Tani I
- Oura C → Toshimori K
- Ozaki M → Steinbrecht RA
- Paul ER, Vo TL, Meyer A, Gröschel-Stewart U: Embryonic chicken gizzard: immunolocalization of collagen and smooth muscle myosin 377–382
- Pérez J → Cifuentes M
- Pérez-Figares JM → Cifuentes M
- Pestarino M → Baccari GC
- Peytevin J → Toumi FN
- Pilgrim C → Beyer C
- Pompolo S → Furness JB
- Raczek S, Yeung CH, Hertle L, Schulze H, Cooper TG: Appearance and endocytic activity of epithelial cells from human efferent ducts in primary monolayer culture 513–519
- Raina AK → Kingan TG

# Advice to authors

Your illustrations will be shown to best advantage if you follow the brief set of instructions below. Please read them carefully. Thank you.

The Publisher

## Preparation of line drawings

Drawings should be in the desired final size and executed in indelible black ink.

Important points to note are: the thickness of lines, size of inscrip-

tions, size of measuring points, and adequate spacing of shaded and dotted areas.

Words should be in the proper upper- and lowercase letters and not all in CAPITAL letters.

Following are the optimal sizes *after* reduction:  
Capital letters and numbers: 2 mm  
Lowercase letters: 1.6 mm

ABCDEFGHIJKLMNOPQRSTUVWXYZ  
abcdefghijklmnopqrstuvwxyz  
1234567890 1.5° III IV VIII IX ∞ % ≈  
[(=--+x÷ !?: " ",)] (A) (B) (a) (b)

ABCDEFGHIJKLMNOPQRSTUVWXYZ  
abcdefghijklmnopqrstuvwxyz  
1234567890 1.5° III IV VIII IX ∞ % ≈  
[(=--+x÷ !?: " ",)] (A) (B) (a) (b)

①

③

samples 1-5 show  
the original size and  
reduction × 50%

④

⑤

**Selection and preparation of illustration material for halftones** (photographs, micrographs, X-ray films, instrument traces etc.)

Photographs should be sharp, well-contrasted glossy prints of the original negative, trimmed at right angles. Halftone illustrations should fit the format of the printed page (print area) so that 1:1 reproduction is possible. If reduction is absolutely necessary, please state the desired scale. Mark or crop marginal portions that are not required (at right angles, please).

Illustrations that are to appear together should be mounted as plates and, together with the legends,

should not exceed the print area. Illustrations must be **mounted on paper-thin flexible material**. Do not use thick cardboard.

Please indicate the significant parts of X-rays on a copy or overlay.

For lettering, marks and scales, use rub-on labelling like Letraset, Mecanorma, or Artist-Aid. **Inscriptions** should be a **maximum of 3 mm** high. Please protect them with an overlay.

Unless they interfere with important information in the illustration, numbers or lowercase letters that denote the sequence of illustrations in plates should be inserted in the lower left-hand corner of the illustrations. In illustrations that provide poor contrast for labelling, i.e. diffuse or mottled backgrounds, white letters or numbers are preferable. If necessary, use a white round background with black lettering (Mecanorma or Artist-Aid).

Illustrations reprinted with permission

# Cell & Tissue Research

## Instructions for authors

### 1. Prerequisites for publication

**Authorship.** The Editors of *Cell and Tissue Research* subscribe to recommendations formulated by the International Committee of Medical Journal Editors [Ann Int Med (1988) 108:258–265] regarding criteria for authorship. Accordingly, each person listed as an author or coauthor for a submitted report must meet *all* of *three* criteria. An author or coauthor shall have:

1. conceived, planned, and performed the work leading to the report, or interpreted the evidence presented, or both;
2. written the report or reviewed successive versions and shared in their revisions;
3. approved the final version.

Meeting these criteria should provide each author sufficient knowledge of and participation in the work that he or she can accept public responsibility for the report.

**Certification.** In the transmittal letter accompanying a submitted manuscript, the senior or corresponding author is requested to certify that all listed authors qualify for authorship according to the above three criteria. The author(s) should also certify that: no part of the work described has been published before [except in the form of an abstract or as part of a published lecture, review, thesis, or dissertation (appropriately cited)]; that the work is not under consideration for publication elsewhere; that, if and when the manuscript is accepted for publication, the author(s) agree to automatic transfer of the copyright to the publisher; and that the manuscript, or its parts, will not be published elsewhere subsequently in any language without the consent of the copyright holders.

**Copyright.** (See page A2)

**Retraction.** The editors and publishers recognize their responsibility to promote the recording of accurate, objective and unbiased data, observations, and conclusions drawn therefrom. As a consequence, they reserve the right to publish retractions of articles which are subsequently determined to contain fraudulent data, observations, or conclusions.

**Length of reports.** Authors are requested not to separate fragments of a study into individual reports, but to strive to combine them for the full development of a topic. At the same time, reports should be efficient and concise. The normal length of reports accepted by *Cell and Tissue Research* is less than 20 printed pages, including figures and references. Editors will reject reports that do not meet the requirements of full development or conciseness. Authors should avoid reports published in series, but when this is necessary, such series or closely related manuscripts should be transmitted to the same editor.

**Acknowledgements.** All sources of financial support for the investigation being reported, including salaries, or other considerations emanating from outside and inside the institution, should be disclosed and acknowledged.

**Use of animals.** It is expected that appropriate humane treatment of animals shall be observed in studies reported in *Cell and Tissue Research*. The Materials and methods section should contain a description of analgesic and anesthetic procedures followed, as well as humane methods of maintenance and sacrifice. Authors are encouraged to cite applicable national or other standards of humane treatment which have been followed and to note review of protocol by institutional animal use committees.

**2. General.** Manuscripts and their accompanying illustrations must be submitted in *triplicate* to facilitate reviewing. **Text** must be *double-spaced* with wide margins throughout. Daisy-wheel or laser printer output is preferred; low-definition dot-matrix printers must not be used; poor print quality will necessitate retyping. Manuscripts must conform to the *precise format* of recent issues of the journal. *Three* accurate sets of figures must be submitted: mounted layouts of the originals and two sets of good-quality photographs (*not photocopies*). Originals will be destroyed six weeks after publication unless their return is requested. Before preparation of the figures, paragraph 15 should be read carefully.

To facilitate communication between the authors, editors and publisher, the author should furnish a telex or fax number on the title page of the manuscript.

**English language.** To assure the widest possible readership only manuscripts in English will be considered. Authors not entirely familiar with English usage should seek the assistance of a native English-speaking colleague. English-language editorial assistance is available when needed. However, correct style is the responsibility of the authors. Although either British or American usage is permitted, the usage in each paper must be consistent.

**Review procedure.** Manuscripts are normally subject to the assessments of reviewers and the editor. Manuscripts that have been extensively modified in the editorial process will be returned to the author for retyping.

**Changes in proofs.** A charge will be made for changes introduced after the manuscript has been set in type.

Brief accounts containing new interesting results may be published as "**Short communications**". They may not exceed four printed pages, including tables and figures. The figures should not occupy more than two-thirds of one printed page. *The editors reserve the right to make the decision as to whether a manuscript qualifies as a "Short communication"*.

The text is to be arranged in the following sections: Summary; brief Introduction; Materials and methods; Results; Discussion; Acknowledgements; References; Figure legends; Tables. The text must be concise and consistent as to spelling, abbreviations etc., with *all* pages numbered consecutively. The desired position of figures and tables should be indicated in the left margin.

**3. The first page of the manuscript** must provide: the title; name(s) of author(s); departmental and institutional affiliation(s). If there are several institutes and addresses, then the name and address to which correspondence (and proofs if this differ) should be sent must be made clear. The title should be brief and should indicate the species studied (e.g., *Phormia regina*). Subtitles are not encouraged and a numbered pair of articles "I" and "II" is acceptable only if both are submitted and accepted together.

**4. The Summary** should not exceed 200 words, should be one paragraph and should be free of references and abbreviations.

**5. Key words.** Immediately after the Summary, up to **seven** topical Key words must be supplied for indexing. These should be taken from the Thesaurus, published in the General Index (1988), or selected according to the same principle. After the Key words, the **names of the species** used should be listed. If more than three species were used, record here only the three most important.

**6. Footnotes.** Those that do not refer to the title or authors should be numbered consecutively and kept to a minimum.

**7. The introduction** (not headed) should give the pertinent background to the study and the question(s) the study seeks to answer.

**8. Names of animals.** Except for common domesticated forms, each species referred to in the manuscript must, at first mention in the text, be designated both by an accepted common name, if there is one, and the scientific name. Example: chaffinch; *Fringilla coelebs*. The scientific name must conform to the International Rules of Zoological Nomenclature. Authors unfamiliar with the taxonomy of the group to which a species belongs should consult an expert to ensure that it is properly identified and that the correct name is used. If there is no generally accepted specific common name, a group name may be used with the scientific name. Example: the toad (there are several species), *Bufo marinus*. For domesticated species common names alone may be used with indication of stock, breed, or race. Examples: Wistar white rat, white leghorn chicken; see also General Index (1988).

**9. Hyphenation.** Compounds consisting of a noun and an adjective should be hyphenated, as in electron-microscopic examination; electron-dense granules: type-3 cell. Noun-noun compounds used as adjectives should also be hyphenated, e.g., lymph-node cells, bone-marrow lymphocytes, wing-pad bristles, guinea-pig oviduct.

**10. Materials and methods** must give, in addition to the names of animals used (as in 7), the number of animals used, the conditions under which the animals were kept, and the anesthetic or other methods used to prevent the animal suffering unduly during the experimental procedures. For particular chemicals or equipment, the name and location of the supplier should be given in parentheses.

**11. The Results** section should present the findings of the research, supported by statistical or illustrative validation of the assertions. *It should be free from discussion.*

**12. The Discussion** section should cover, but not simply repeat the new findings presented in Results, setting these in context and interpreting them with a minimum of speculation.

**13. References in the text** should conform to the following examples: "Land (1975, 1976) has shown ..." or "(Land 1975, 1976; Sandeman and Markl 1980; Hengstenberg et al. 1982)." References to "unpublished observations" are discouraged and should be used only for uncontroversial items (such as confirmation of results in another species). These observations, as well as "personal communications," should be fully attributed, giving the name and initials of the source. Authors should submit, with the manuscript, copies of "In press" or "Submitted" references for the review process.

**14. All references** should be listed at the end of the paper as follows:

- a) Single author – list alphabetically and then chronologically.
- b) Author and one coauthor – list first alphabetically by coauthor, and then chronologically.
- c) First author and more than one coauthor – list chronologically (not alphabetically by the second author) because only the first author's name and "et al." followed by the year of publication will be used in the text.
- d) In the event that more than one paper by the same author or team of authors published in the same year is cited, the letters a, b, c, etc., should follow the year – e.g., Schwartz (1971 a) – in both the text and the reference list.

References to articles in periodicals must include: names and initials of all authors, year of publication, complete title of paper, name of journal (abbreviated in accordance with *Index Medicus*), number of volume, and first and last page numbers.

References to books must include: names of authors, year of publication, full title, edition, publisher, and place of publication.

#### Examples:

Hansen GN, Hansen BL, Jørgensen PN (1987) Insulin-, glucagon- and somatostatin-like immunoreactivity in the endocrine pancreas of the lungfish, *Neoceratodus forsteri*. *Cell Tissue Res* 248:181–185

Marder E (1987) Neurotransmitters and neuromodulators. In: Selverston AI, Moulins M (eds) *The crustacean stomatogastric nervous system*. Springer, Berlin Heidelberg New York, pp 263–300

Sternberger LA (1986) *Immunocytochemistry*, 3rd edn. Wiley, New York

Articles "in press" may be cited in the reference list, but articles "submitted" or "in preparation" should not be included.

References must also be typed double-spaced.

**All species and subspecies names used in the reference should be underlined to indicate italicization.**

**15. Illustrations.** The number and size of the *illustrations* must be consistent with the minimum requirement for clarification of the text. Previously published figures cannot be accepted. Numerical data given in graphs or tables should not be repeated in the text.

The journal is not subsidized in any way. Therefore, when papers have a *great number of halftone illustrations* (even though the editors agree that they are essential), it is necessary that authors and their institutions contribute to the cost of reproduction. *Color illustrations* will be accepted; however, the authors will be expected to make a contribution (DM 980.00 for the first page and DM 500.00 for each additional page) towards the extra costs. All

figures, whether layouts of micrographs, graphs, or diagrams, must be *numbered consecutively and submitted on separate sheets*. Each separate figure should be *marked on the reverse with the figure number, author's name, and brief title*. The publisher reserves the right to reduce or enlarge illustrations.

**Halftone illustrations**, i.e., micrographs, shaded drawings, wash drawings, earmarked for reproduction, should be submitted as sharp, glossy originals, maximally trimmed at right angles to eliminate unnecessary areas without significant information content and be of the desired final size; for color illustrations, *slides* should also be sent.

*Inscriptions* must be about 3 mm high and clearly visible. Letraset (or equivalent instant lettering) is recommended for lettering micrographs, including figure numbers.

*Magnification* should be expressed numerically (e.g.,  $\times 700$ ;  $\times 80\,000$ ) in the legend.

*Calibration bars* should be added to the microscopic figures. A bar gives accurate information on magnification even when illustrations are reduced or enlarged.

Wherever possible, individual micrographs should be mounted together in the form of *economically arranged layouts*, without necessarily taking their numerical order into consideration. Such individual figures grouped together must be separated by spaces of no more than 1 mm. If at all possible, *illustrations and legends should not be placed sideways*.

For technical reasons (new reproduction methods) all illustrations must be mounted on flexible white drawing paper. Thick cardboard is not acceptable.

The layouts or single figures may either match the width of the column (8.6 cm), the width of the entire page (17.8 cm) or be 12.8 cm wide with the legend at the side. The maximum length of the layout is 24 cm, including the legend printed at its foot. It is important that authors use the maximum possible size only to increase the information content of illustrations; large peripheral areas of figures with low information content must be avoided.

Parts of figures that require particular care in reproduction should be indicated on a *transparent overlay* with a soft pencil.

**Stereo illustrations.** Authors who wish to submit stereo illustrations should refer to the detailed instructions printed in previous issues of the journal (see, e.g., Vol. 266, No. 3, 1991) or consult one of the editors.

**Line drawings** should be submitted as *good-quality prints*. The letters should be 2 mm high in the printed version. The inscriptions should be clearly legible. If reduction is necessary, the scale desired should be stated.

**16. Legends** must be concise and should provide a brief, self-sufficient explanation of the illustrations. Avoid remarks like: "For explanation, see text". In the manuscript, legends should be typed on a new page after the References. If the magnification is quoted in a sentence, it should appear in parentheses, e.g. ( $\times 500$ ); at the end of the legend it should appear, e.g. "... cytoskeleton.  $\times 41\,000$ ." The length of calibration bars should be given, e.g. *Bar: 1.0  $\mu$ m*. Explanation of labels on illustrations should be given either as "... with Reissner's fiber (RF)" or "*RF* Reissner's fiber." Please underline "*arrows*," "*arrowheads*," and "*asterisk*" when these words appear in a legend.

**17. Tables** must be numbered consecutively in *arabic* numerals. Each table must be typed on a separate sheet. The head of each table should provide a brief, self-sufficient explanation of its contents.

**18. Mailing.** Manuscripts and illustrations should be *well packed* to avoid damage in transit.

**19. Offprints** can be ordered at cost price provided the order is received with the corrected proof.

## ***Ecophysiology of the Camelidae and Desert Ruminants***

1989. X, 120 pp. 37 figs. (Adaptations of Desert Organisms) Hardcover DM 106,- ISBN 3-540-50806-6

## Series G: Ecological Sciences

Volume 24

J. Blondel, A. Gosler, J.-D. Lebreton,  
R. McCleery (Eds.)

### ***Population Biology of Passerine Birds***

*An Integrated Approach*

1991. XVII, 496 pp. 116 figs. 109 tabs. Hardcover DM 236,-  
ISBN 3-540-51759-6

**Population Biology of Passerine Birds** is an up-to-date synthesis of the most recent developments in its field, especially in the framework of modern life history theories. Major topics include quantitative genetics, ecological physiology, the study of social structures using individually marked birds in the wild, and finally biometry, which allows to quantify such important parameters as survival at different stages of life and to create a model of the overall demography of the populations.

Volume 25

P. C. Reid, C. M. Turley, P. H. Burkill, Plymouth Marine  
Lab., Plymouth (Eds.)

### ***Protozoa and Their Role in Marine Processes***

1991. X, 506 pp. 74 figs. 34 tabs. Hardcover DM 298,-  
ISBN 3-540-18565-8

The volume evaluates the ecological role of protozoa in the sea. The major points of discussion are the role of protozoa in the microbial food web, in the cycling of carbon and nitrogen and the extent to which this web acts as a link or sink to metazoa in the water column.

The following topics are covered: Taxonomy - Methods - Pollution - Symbiosis - Autecology - Trophic Behaviour - Community Grazing - Energetics and Production - Marine "Snow" and "Fluff" - Mineral Flux - Nutrient Cycling - Modelling.

## Series H: Cell Biology

Volume 48

D. Pansu, École Pratique des Hautes Études and INSERM,  
Lyon; F. Bronner, University of Connecticut, Farmington,  
CT (Eds.)

### ***Calcium Transport and Intracellular Calcium Homeostasis***

1991. XXII, 434 pp. 116 figs. 29 tabs. Hardcover DM 198,-  
ISBN 3-540-51778-2

Calcium plays an essential role in various physiological functions. This study assembles current information on the mechanisms involved in intracellular calcium regulation of interest to biochemists and molecular biologists. Physicians and pharmacologists will also find new useful information as defects in calcium transport play a role in various disorders.

Volume 49

J. E. G. McCarthy, Gesellschaft für Biotechnologische  
Forschung, Braunschweig; M. F. Tuite, University of Kent,  
Canterbury (Eds.)

### ***Post-Transcriptional Control of Gene Expression***

1991. XIX, 652 pp. 204 figs. 46 tabs. Hardcover DM 298,-  
ISBN 3-540-51774-X

The book summarizes the latest results on the regulation of the gene expression which are interesting for molecular biologists as well as for biotechnologists.
